

Apollo 18 Mission Report

You need to put the following on the next 2 blank pages in your notebook:

1. On the **first blank page** include a picture and/or sketch of your design (FULL PAGE). You can include a side (profile view), top (bird's eye view) and/or front view. You need to include measurements and lots of details (see examples). It needs to be in FULL COLOR and be created using rulers (for the straight lines).
2. On the **second blank page** explain (step-by-step) how to make your design. Include all the steps necessary to make the final design you tested.
3. Write down and discuss **what has been discovered or found out** by doing this experiment. Look at your results from your tests and discuss what you learned and why your design worked or did not work. Explain what you would do differently in the future if you did the activity again. (a 5-10 sentence explanation and discussion would be good for this section)
4. Include anything else (in your written discussion or drawing) that would be helpful to someone looking at your paper and trying to understanding what you did.
5. Enjoy...
